EDUCATION

San Diego State University

Bachelor of Science in Computer Science

San Diego, CA

Aug. 2025 – Jun. 2027 (expected)

- **Coursework:** Machine Learning, Artificial Intelligence, Applied Statistics, Operating Systems, Algorithms

Grossmont College

Associate of Science in Computer Science

San Diego, CA

Aug. 2022 – Jun. 2025

PROJECTS

nexTix | *Python, FastAPI, Claude Agent SDK, MCP, Celery, Docker, Next.js* | [GitHub](#)

Sep. 2026 – Present

- nexTix is a kanban-style ticket board where you describe a code change in one sentence, and a Claude agent turns it into a GitHub issue, works on it in an isolated Docker sandbox, and opens a pull request for you to review
- Engineered the triage prompt and JSON-schema structured output that judges if a request is actionable or needs one clarifying question, validated by strict Pydantic models so malformed replies fail loudly.
- Wrote the agent's system prompt as scoped rules (no CI edits, no pushes, kill only its own PIDs) with a needs-input escape hatch: the agent's question routes to the ticket and a reply re-queues the run.
- Defended against prompt injection and sandbox escape: user and repo text framed as data, credentials redacted from transcripts, sandboxes non-root with capabilities dropped, resource caps, file-based secrets.
- Made agent runs measurable: PR review comments trigger a follow-up run on the same branch; each run records tests, before/after screenshot pixel diffs, tokens, cost, and routed model; 500+ tests in CI.

Mordi | *Java, Spring Boot, React, PostgreSQL, Redis, Docker, nginx* | [Live](#)

- A full-stack accountability tracker that visualizes your tasks and habits across a calendar, a map, and a focus timer, with weekly progress reports.
- Operate a Spring Boot REST API (JWT auth, goal tracking, weekly reports) as four containers on an Oracle Cloud VPS behind nginx with auto-renewing TLS at \$0/month; CI has caught 9 defects before deployment.

Lonely Chess | *Python, Interpreter Design* | [GitHub](#)

- Designed a language where PGN chess notation runs as source code and built its Python interpreter (state-machine parser, loops, conditionals); FizzBuzz runs as a 2,669-move game.

EXPERIENCE

Web Developer Intern

H.E.R.S.365, a moderated community platform for girls' flag football

Oceanside, CA (Remote)

Jul. 2026 – Aug. 2026

- Fixed 2 pre-launch Stripe billing defects (a webhook path that charged without recording the transaction, a lookup that billed the wrong tier), proving each fix by reintroducing the bug and watching the new test fail.
- Built a COPPA-compliant parent-approval sign-in flow where a guardian authorizes a child's account, extending the existing JWT layer instead of forking a second auth path.
- Automated nightly PostgreSQL backups with compression, retention pruning, and integrity checks, so a failing dump surfaces immediately instead of during an outage.

TECHNICAL SKILLS

AI & LLM: Prompt engineering, structured outputs, Claude API/Agent SDK, Claude Code, MCP, prompt-injection defense

Languages: Python, Java, Kotlin, TypeScript, JavaScript, SQL, C, Go, Bash

Frameworks: FastAPI, Celery, SQLAlchemy, Spring Boot, Next.js, React

Infra & Data: Docker, GitHub Actions, GitHub Apps, nginx, Linux, Oracle Cloud, PostgreSQL, Redis, Alembic

Testing: pytest, mypy, ruff, JUnit, Mockito, Vitest, Playwright

HONORS

Genius Olympiad — Silver Medal, competitive robotics
