Perfect Phanitchaleun

San Diego, CA | 619-657-5982 | perfectphanitchaleun@gmail.com | linkedin.com/in/perfect-phanitchaleun | github.com/SailmanSeeulater | latesailor.dev

Education

San Diego State University — San Diego, CA

Bachelor of Science in Computer Science — *Aug. 2025 – Jun. 2027 (expected)*

- **Coursework:** Operating Systems, Algorithms, Machine Learning, Artificial Intelligence, Programming Languages

Experience

Software Engineer — Sep. 2026 – Present

Stealth Startup, AI resume-tailoring product — *San Diego, CA*

- Built the resume and LinkedIn import pipeline: PDF and Word uploads parsed in background Celery jobs, LLM extraction that drops any entry the source doesn't state, and a review screen to fix, dedupe, and apply entries.
- Designed the stored account profile as Pydantic-validated JSON with an endpoint reporting each field as ready, pending, or unavailable, plus GitHub-derived project records, all feeding resume generation.
- Built data-rights features: data export, account deletion, and auto-expiry of uploaded resumes and stale imports.
- Contributed about 82 commits (+23.3k lines) and 148 backend tests to the FastAPI and Next.js codebase.

Web Developer Intern — Jul. 2026 – Aug. 2026

H.E.R.S.365 — *Oceanside, CA (Remote)*

- Audited the Stripe integration before launch and fixed 2 billing defects, a webhook path that could charge without recording the transaction and a price lookup that billed the wrong tier, each proven by a regression test.
- Built a COPPA parent-approval sign-in flow on the existing JWT layer, sharing token rules with password sign-in.
- Automated nightly PostgreSQL backups with integrity checks and containerized the app behind nginx.

Projects

Zwans | *Python, Rust, Anthropic API, Docker, MCP* | GitHub — Oct. 2026 – Nov. 2026

- Built a coding agent from scratch on the Anthropic Messages API, with its own tools, sessions, compaction, prompt caching, an MCP client, subagents, and a permission engine that judges each shell command before it runs.
- Built an eval platform of 48 tasks with hidden tests and bootstrap confidence intervals, and used it to show a conversation-following cache breakpoint cuts cost 57% while caching the system prompt alone saves 11%.
- Wrote a Rust sandbox using Linux namespaces, seccomp, and Landlock that starts in 4.0 ms against 37.5 ms for `docker exec`, passes a 20-test escape suite in CI, and matches Docker's pass rate.

nexTix | *Python, FastAPI, Celery, PostgreSQL, Next.js, Docker* | GitHub — Sep. 2026 – Nov. 2026

- Built a kanban board that turns a plain-language request into a GitHub issue, runs a Claude coding agent on it in an isolated Docker sandbox, and opens a pull request, with GitHub as the source of truth.
- Designed the run lifecycle on Celery with live SSE transcripts, a heartbeat reaper, and per-run cost tracking, and confined agents to a network with egress only through a Squid allowlist proxy.
- Shipped an MCP server so Claude Code can file and track tickets, with CI across about 640 tests.

Mordi | *Java, Spring Boot, React, PostgreSQL, Redis, Docker, nginx* | Live

- Deployed four containerized services on Oracle Cloud behind nginx with auto-renewing TLS, at $0/month.
- Audited my own API, rotated a leaked JWT secret and database password, closed an account-enumeration hole, and added Redis rate limiting at 5 logins per minute per IP.

Technical Skills

Languages: Python, TypeScript, Java, Kotlin, Rust, JavaScript, SQL, Go, C
Frameworks: FastAPI, Celery, Spring Boot, Node.js, Express, React, Next.js, Pydantic, SQLAlchemy
AI: Claude API, Claude Code, MCP, Agent Harnesses, Evals, Prompt Caching, Gemini, Ollama
Infrastructure: PostgreSQL, Redis, Docker, nginx, Linux, Oracle Cloud, GitHub Actions, pytest, JUnit
