EDUCATION

San Diego State University

San Diego, CA

Bachelor of Science in Computer Science

Aug. 2025 – Jun. 2027 (expected)

- Relevant Coursework: Operating Systems, Computer Architecture, Algorithms, Advanced Programming Languages, Applied Probability

Grossmont College

San Diego, CA

Associate of Science in Computer Science

Aug. 2022 – Jun. 2025

EXPERIENCE

Web Developer Intern

Oceanside, CA (Remote)

H.E.R.S.365, a moderated community platform for girls' flag football

Jul. 2026 – Aug. 2026

- Audited the **Stripe** integration before launch and fixed 2 billing defects: a webhook path that could charge a customer without recording the transaction, and a price-lookup bug that silently billed the wrong subscription tier, proving each fix by reintroducing the bug and confirming the new **unit test** failed.
- Built the parent-approval sign-in flow satisfying **COPPA** parental consent, letting a guardian authorize a child's account in place of a password with expiry on unanswered requests, and extended the existing **JWT** issuance layer instead of forking a second auth path so both routes share one set of token rules.
- Automated nightly **PostgreSQL** backups with compression, scheduled retention pruning, and integrity checks, turning an unmonitored assumption into a documented recovery path where a silently failing dump surfaces immediately instead of during an outage.

PROJECTS

Mordi | *Java, Spring Boot, Spring Security, React, PostgreSQL, Redis, Docker, nginx, GitHub Actions* | [GitHub](#) | [Live](#)

- Built a **Spring Boot REST API** with **JWT** sign-in for goal tracking, daily behavior logging, and automatic weekly mood and completion reports, storing records in **PostgreSQL** under versioned **Flyway** migrations rather than framework auto-generation, so every schema change is reviewed in a pull request instead of inferred at startup.
- Deployed and operate four containerized services on an **Oracle Cloud VPS** at latesailor.dev, behind host **nginx** with auto-renewing **Let's Encrypt** TLS, hardened response headers, and uptime monitoring on a **Spring Boot Actuator** health endpoint, at \$0/month on free-tier hardware shared with two other projects.
- Audited the API and found a **JWT** signing secret and database password committed in plaintext since the first commit: rotated both, closed an account-enumeration hole where failed logins revealed whether an email was registered, and added **Redis**-backed rate limiting of 5 login attempts per minute per IP.
- Set up a **GitHub Actions** CI pipeline running **JUnit** and **Mockito** API tests plus **ESLint**, **Vitest**, and a production build on the web app for every push and pull request, which has caught 9 defects before deploy, including a broken dependency that would have crashed the API on startup.

Lonely Chess | *Python, PGN Notation, Interpreter Design* | [GitHub](#) | [Live](#)

- Designed an esoteric programming language in which standard **PGN** chess notation executes as source code, and built the **Python** interpreter for it: a state machine parsing move sequences into integer and string declarations via **7-bit binary encoding**, for loops, if statements, modulo, and four-function arithmetic.
- Implemented **FizzBuzz** (range 1–100) as a 2,669-move chess game, exercising nested conditionals, string concatenation, and implicit else branching.

TECHNICAL SKILLS

Languages: Java, Kotlin, Python, JavaScript, SQL, C++, Bash

Frameworks: Spring Boot, Spring Security, React, Node.js, Vite

DevOps & Cloud: Docker, Docker Compose, CI/CD, GitHub Actions, Kubernetes, nginx, Linux (Ubuntu), Oracle Cloud, Git, GitHub, Postman

Testing: JUnit, Mockito, Vitest, React Testing Library, ESLint

Databases & Libraries: PostgreSQL, Redis, MySQL, Flyway, REST APIs, JSON Web Tokens (JWT), Stripe API
